PROTECTION that NEVER SLEEPS

## CO – Experts Low Level CO “Health” Monitors Features & Benefits

Be in “Control of”, NOT at the “Mercy of” Carbon Monoxide

CO – Experts Low Level CO “Health” Monitors provide you with VERY EARLY Warning of the presence of Carbon Monoxide, long before a serious health or life safety threat exists.

CO – Experts tell you when it is time to call your Professional Heating Contractor to investigate the source of your CO and correct the problem immediately, instead of receiving a much later Warning from a UL-2034 Listed CO alarm that most likely will not tell you until it is time to call 911 for a “Ride” to the nearest hospital having a Hyperbaric Therapy Medical Center.

UL-2034 Listed CO alarms are tested at 70, 150 and 400 PPM and NONE of these Warning are sounded in “REAL TIME”, all audible alarms have “Must Not Alarm” periods; as well as delays.

For example, at 70 PPM, a UL-2034 Listed CO alarm “Must Not Alarm” in the first hour, 60 minutes, and the audible warning may be delayed as long as 240 minutes, ... 4 HOURS.

To make this data even worse than it seems at first glance is the fact that this also means that UL-2034 REQUIRES NO TESTING below 65 PPM.

You Choose the “Real Time” Audible Alarm Warning Level, 10 or 25 PPM.

All CO – Experts Visual / Display WARNING starts at 7 PPM

### Audible Alarm Levels

### Alarm “HUSH” CYCLES HERE

0 to 6 PPM .... No Warnings	None
10 to 24 PPM	24 hours
25 to 34 PPM	one hour
35 to 49 PPM	one hour
50 to 69 PPM	one hour
70 PPM to "HI"	4 Minutes

**\*\*\*\*\* The following is a Very Important C O – Experts Feature**

When the "Hush" is employed, the audible alarm is silenced for the designated period of time: however, the visual display continues to show the current level of C O present. IF, after any "Hush", the C O level present continue to rise to the next higher level, the Monitor will automatically OVER-Ride the "Hush" and reactivate the audible alarm at the higher, faster, level of warning.

To activate / employ the "Hush" feature, as soon as the Monitor's audible alarm warning cycle completes the third of its 3 beeping cycles consisting of four beeps per cycle, simply touch / push the test / hush / reset button and the Display window will show "Acc", to acknowledge your request the "Hush" to be employed. The Monitor will then show "SIL", to indicate that AFTER the regular three cycles of beeping, [which follows every push of the "Test" button], your Monitor will be SILENT for the specified period of time, unless the C O present rises to the next higher level of warning. Removal of the battery will immediately cancel the "Hush" feature.

**Important additional information about your C O Monitor:**

C O is almost ALWAYS picked up by Monitors while being transported, from both the UPS Trucks and especially from the Propane Forklifts being used in the terminals. Therefore, there may be C O accumulated inside the housing and in the sensor when it is initially removed from its individual box that will cause an alarm within a minute or so of initially installing the battery. Before installing any Monitor in a customer's home, the "Stored Data" should be electronically cleared and the procedure explained to the customer.

To CLEAR / ERASE all stored data, you simply depress the Test / Hush / Clear button, and continue to hold it depressed until the Green L.E.D. illuminates with a continuous, [not blinking], green light. Release the button, and the Monitor will immediately sound a long single beep, and the LCD, [Display], will show "Clr", indicating that all previously stored data has now been erased.

Removal of the battery will immediately cancel the "Hush Cycle" feature; however, it is very important to remember that removal of the battery does NOT "clear / erase" the stored data saved in your Monitor. This can be a very important feature in my opinion because it prevents you from accidentally losing this important stored data which you might need to show to the 1st Responders, Medical Professionals or perhaps a Liability Attorney. The stored data is cleared / erased **ONLY** when you intentionally / mechanically clear the stored data, as instructed above.
